

Power Your Battery Charging Systems and Forklifts More Efficiently

For distribution centers, warehouses, and manufacturing facilities usable floorspace comes at a premium. Starline offers a unique solution to power forklifts, batteries, or other electrical equipment while optimizing space utilization. With overhead, wall-mount, and rack mounting options available, Starline Track Busway provides a customizable solution for power distribution that drastically improves cable management and safety. Starline's open channel design allows for quick and simple modifications or reconfigurations of power access points, providing the future-proof infrastructure needed for anticipated growth and advancing technologies.

SERVICE OFFERING

Need assistance?

Our team of in-house service technicians are ready to assist you with a comprehensive package of implementation services.

BENEFITS

- Optimized Space Utilization
- Reduced Installation Time and Costs
- Scalable, Flexible, and Reconfigurable

FEATURES & SPECS

- Configurable plug-in units eliminate the need for numerous panels and long runs of pipe and wire
- Plug-in units can be tapped and moved instantly at any location, providing power at the point of use
- Multiple mounting options provide flexibility for a wide range of charging stations, forklift parking, and assembly areas
- Reduces material waste when modifying electrical layouts or upgrading charging equipment

TECH DATA

- 40 to 1200 Amps, 3-Phase systems rated up to 600Vac or 600Vdc
- Section lengths manufactured to custom specifications
- Plug-in units rated to support all systems
- UL, NEC, ETL & IEC certifications
