

Power at the Point of Use

Whether you run a traditional supermarket, convenience, or specialty items store, your ability to make quick changes to the floor plan is crucial. Quite often, the way power is distributed throughout your facility ultimately determines if those changes can be made at all. Unlike conduit and wire systems, Starline Track Busway allows you to quickly relocate power for lighting and small loads where and when it is needed. No matter what kind of seasonal offerings, sample station, or holiday display, Starline's unique busway design puts you in position to handle all of your supermarket's electrical needs.

BENEFITS

- Scalable for future expansions
- Reduced installation time and cost
- Integrated lighting and power delivery system

FEATURES & SPECS

- Plugs and fixtures can be installed at the point of use without turning off the busway power
- Multiple circuits can be powered on a single track for different load types
- Compatible with a variety of third party lighting fixtures
- UL and ETL Listed
- Systems available in ranges between 40 and 225 amps
